

Biodegradable "Corn Based" Plastic Products

Effective Replacements For Petroleum-Based Products

Our new sustainable green line of laboratory plastics replaces oil based plastic polymers with bio-degradable corn based plastics. The result are functional high quality products that are strong and clear, but will degrade in a landfill in as little as 70 days vs 1000 or more years for petroleum based plastics. We have concentrated on large and bulky products to begin with, to have the greatest possible affect on reducing the plastic waste stream.
